                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
TISSUE SPECIFICITY: EXPRESSED IN THE EMBRYO IN PRE-SOMITIC
MESODERM, CAUDAL SOMITES, MIDBRAIN, AND CEMENT GLAND. MOST
ABUNDANT IN ADULT BRAIN, EYE, HEART, LUNG AND OVARY. LOWER
IN INTESTINE, KIDNEY, OVIDUCT AND PHARXYX.
DEVELOPMENTAL STAGE: EXPRESSED DURING EARLY DEVELOPMENT.
SIMILARITY: TO OTHER PROTEIN TYROSING FANILY.
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE TYROSINE PHOSPHATE.

--- TISSUE SPECIFICITY: EXPRESSED IN THE EMBRYO IN THE BRAIN ,
SPINAL CORD AND IN THE FIRST AND FOURTH VISCERAL ARCHES. ;
ABUNDANT IN ADULT BRAIN, WITH LOWER LEVELS IN EXE, HEART,
OVIDUCT, LUNG AND PHARYINX.
--- IDEVELOPMENTAL STAGE: EXPRESSED DURING EARLY DEVELOPMENT.
--- SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATAL
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
--- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS.
--- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

OM protein - protein search, using sw model

Run on: May 9, 2000, 22:32:11; Search time 49.21 Seconds (without alignments) 167.716 Million cell updates/sec

Title: Perfect score: Sequence: US-09-104-340-4 1466

1 MDCQLSILLLLSCSVLDSFG......VPIGKCSCNAGYEERGFMCQ 271

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 83857 segs, 30454973 residues

Total number of hits satisfying chosen parameters: 83857

Minimum DB seq length: 0
Maximum DB seq length: 1000000

Post-processing: Minimum Match 0% Listing first 45 summaries

Database : SwissProt_38:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TIL-1 beta alters the expression of the receptor tyrosine kinase

T **T-EphA3 in neonatal rat cardiomyocytes.";

L Am. J. Physiol. 274:H331-H341(1998).

C -!- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY. BINDS

C -!- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY. BINDS

C -!- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE = ADP +

PROTEIN TYROSINE PHOSPHATE.

C -!- SUBCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.

C -!- SIMILARITY: TO OPHER PROTEIN-TYROSINE KINASES IN THE CATALYT

C -!- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

-!- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PROTEIN TYROSINE PHOSPHATE.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATI
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       s SWISS-PROT entry is copyright. FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAI
EPHRIN-A1, -A4 AND -A5. BINDS MORE POORLY TO EPHR
CAPALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADI
PROTEIN TYROSINE PHOSPHATE.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE!
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN
                                                                                                                                                                              receptor tyrosine kinase,

- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY.
- EPHRIN-A1, -A4 AND -A5. BINDS MORE POORLY TO EPHRIN-A2
- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP +
- PROTEIN TYROSINE PHOSPHATE.
- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAIN
- SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CA-
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-OCT-1996 (Rel. 34, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                 EPHRIN-A1, -A2, -A3, -A4 AND -A5.

CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE PHOSPHATE.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: BRAIN.

SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATA

DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.

SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.
                                                                                                                                                                                                                                                                      FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A

BINDS TO EPHRIN-A1, -A2, -A3, -A4 AND -A5.

CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE PHOSPHATE.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: A NUMBER OF VARIANTS ARE PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: ALMOST EXCLUSIVELY EXPRESSED IN THE NERVOUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SYSTEM. PREDOMINANTLY EXPRESSED IN NEURONS.
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                        PF00069;

                                                         EPHRIN-A1, -A2, -A3, -A4 AND -A5.

CATALYTIC ACTIVITY: ATF + A PROTEIN TYROSINE - ADF + PROTEIN TYROSINE - PROPERTION: TYPE I MEMBRANE PROTEIN.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: A NUMBER OF VARIANTS ARE PRODUCED BY ALTERNATIVE SPLICING.

SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALDOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

BI
EPHRIN-A1, "A2, "A3, "A4 AND "A5.
-i- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP +
PROTEIN TYROSINE PHOSPHATE.
-i- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i- SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATE
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
-i- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
